

Votre Partenaire Logistique

If businesses are to develop positively in a competitive, global environment, they need to be evermore enterprising and innovative. The solutions they provide day after day have to offer increasingly high performance and superior efficiency. In response to market requirements, TECL and its clients have built up genuine partnerships, rethinking their working relations. The haulier has moved on to become a true logistics specialist, able to store, repackage, dispatch and deliver in the best possible conditions of quality and traceability.

Drawing on a long tradition of hard work and quality of life in its region of origin, TECL brings Brittany closer to Europe and the rest of the world. In return, this business partner is committed to helping local associations such as the Odet Yacht Club.

Logistics Partner

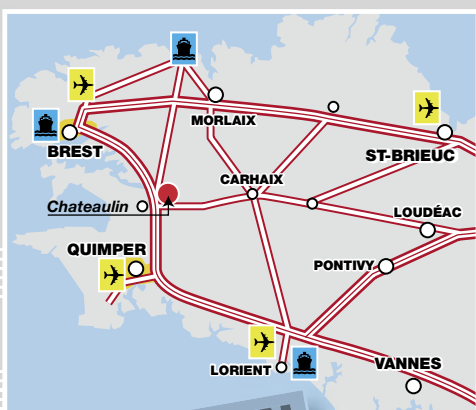

Bringing together a number of complementary activities, the logistics partner TECL schedules industrial and commercial procurement flows. Our expertise ranges from dispatch, information and control networks to storage and repackaging services.

Our know-how is recognised by both local and European manufacturers. Our capacity for reaction is our biggest asset, making us a reference partner for companies whose daily business depends on just-in-time distribution and the ability to respond to market variations.

Certified ISO 9001 (version 2000) to meet customers' expectations in terms of quality, TECL has also been approved by airfreight companies for the reliability of its inland haulage services (in compliance with the article of law L.321-7 of the code of the DGAC – French civil aviation authority).

TECL has developed 3 main operating sites in order to provide the necessary resources for every sector of its business - transport, express deliveries, consulting and logistics.

CHATEAULIN

At Chateaulin, the company's oldest site and headquarters, from where the full range of transport operations are supervised.

PARIS

In Paris, alongside the A1 motorway, close to the Roissy Charles de Gaulle airport, providing a strategic hub between the north and the south of Europe, and an interface between road and air freight.

LYON

In Lyon, opening up a gateway towards Italy and southern Europe.

Your Logistics Partner

Haulier

At the heart of TECL's business lies the road, the predominant form of transport in Europe, which is undergoing major transformation.

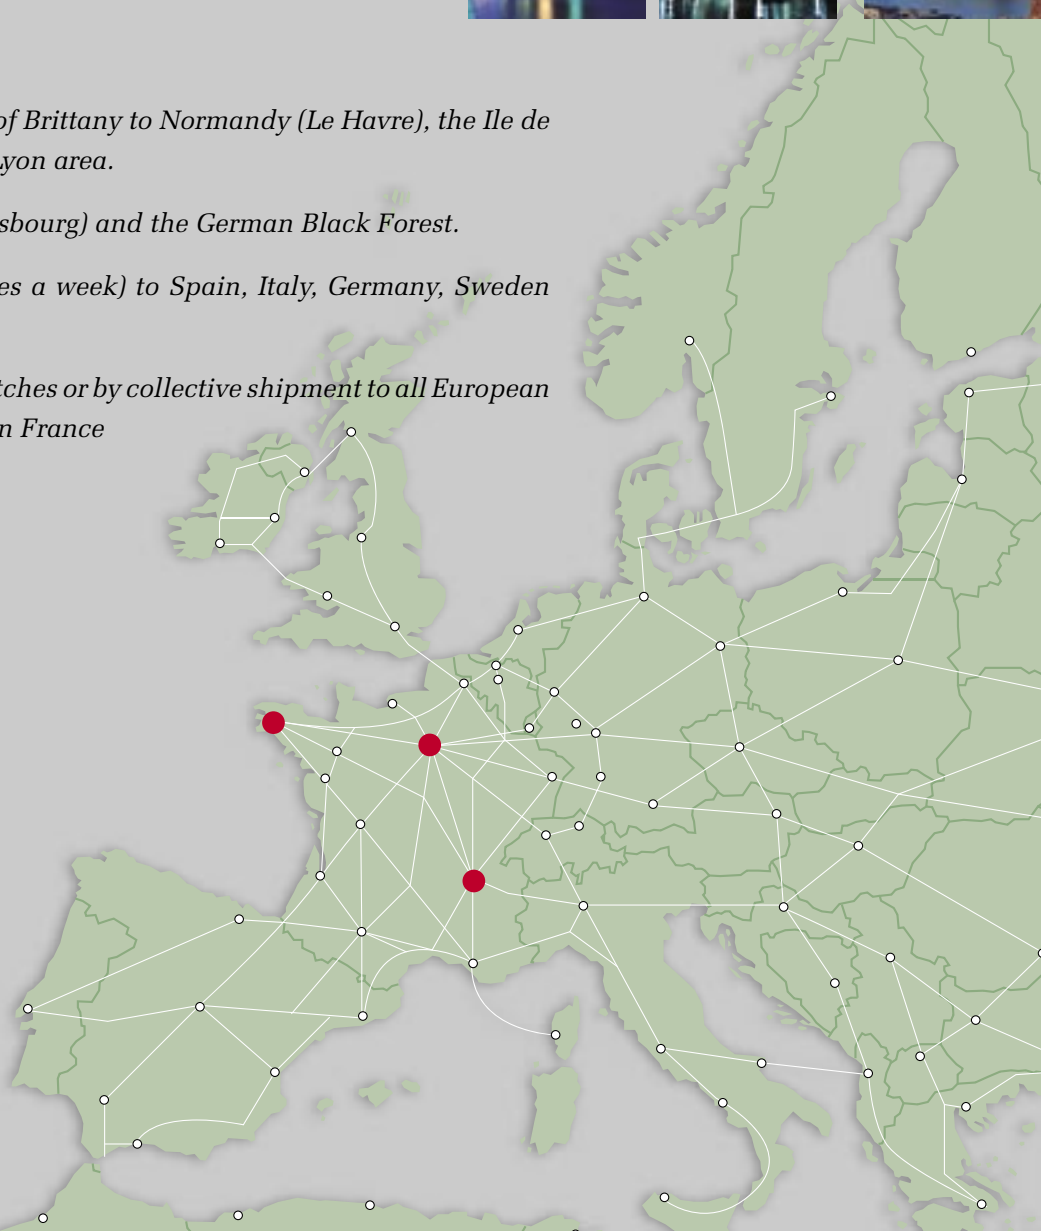

From the tip of Brittany to the four corners of Europe, our fleet of vehicles provides a full range of services, from regular lines to transport on request and express deliveries.

- *Daily Finistère services.*
- *Daily return trips from the tip of Brittany to Normandy (Le Havre), the Ile de France region (Paris) and the Lyon area.*
- *Daily transport to Alsace (Strasbourg) and the German Black Forest.*
- *Regular transport (several times a week) to Spain, Italy, Germany, Sweden and Switzerland.*
- *Transport on request for full batches or by collective shipment to all European countries and to every region in France*

Special operation delivery to London

INTERVIEW :

rené LE GRAND

A passion for enterprise

TECL has just moved into its new warehouses in the north of Paris. This is a logical step in its development, demonstrating its desire to strengthen its logistics services, which are already wide-ranging and renowned for their quality.

TECL rapidly made a place for itself in the market. What is that down to?

Its capacity for reaction and its availability. We can see that, right from the outset, TECL quickly made itself known in the automotive sector thanks to its diverse offer and its excellent capacity for reaction. From the time of the company's creation, we have always wanted to provide a global solution to logistics problems. This includes transport of course, but also covers logistics upstream and downstream of factories and distribution centres, and the deployment of combined solutions, bringing together road and air for example. Our strength lies in the effective outsourcing of services for our clients.

The Paris site means repositioning for TECL. Is it a new start?

More than anything, it is a logical development that will strengthen the capacity of our Chateaulin platform. In fact, we needed to increase the capacity of our Paris site in order to meet the requirements of one of our clients. We made the most of this opportunity to equip ourselves with tools offering new possibilities.

Has logistics supplanted transport?

No, transport has become an integral link in the logistics chain, one of the tools enabling us to provide the best response to the challenges we face. The success of TECL is down to our command over all the links in the logistics chain, which means we can look forward to the future confidently.

How do you see the future of road transport?

It will continue to play a predominant role in Europe, especially with globalisation and the opening up of new

borders in the near future. French hauliers have a role to play, providing that they adapt their transport services to this increasingly global environment. This is what TECL is doing, by looking at all the opportunities that the future has to offer.

The sea, Brittany... is it through your sailing trips that you acquired this taste for a job well done?

We are in Brittany, a region where the relationship with the sea is very strong. I have always had this enduring love of the sea and boats. I know that the sea leaves no room for error. Likewise, our clients expect unflinching service from us. And like a sailing trip, it requires preparation, which is worked on everyday. Partnerships have to be built on, day after day, if we are to be sure of arriving safe and sound.

Your Logistics Partner

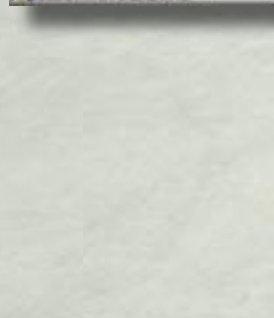

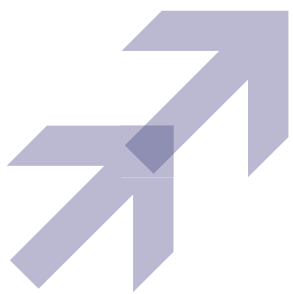

Express carrier

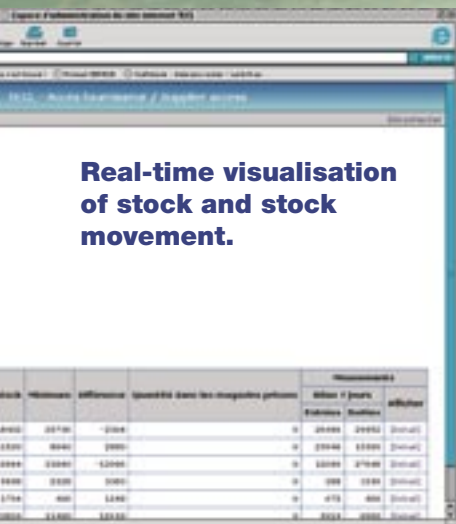

Along with its fleet of heavy goods vehicles, TECL also owns a number of rapid vehicles for express deliveries to destinations across Europe.

This service is part of our desire to offer transport solutions for every situation, for even the most urgent delivery.

Handling these extreme cases is all part of our daily business.

Logistics specialist

Real-time visualisation of stock and stock movement.

Stock	Warehouse	Difference	Quantity	Date	No. packages	Volume	Status
0000	0000	0000	0	0000	0000	0000	0000
0000	0000	0000	0	0000	0000	0000	0000
0000	0000	0000	0	0000	0000	0000	0000
0000	0000	0000	0	0000	0000	0000	0000
0000	0000	0000	0	0000	0000	0000	0000
0000	0000	0000	0	0000	0000	0000	0000
0000	0000	0000	0	0000	0000	0000	0000

The management of «just-in-time» stock strictly limits procurement and delivery to the requirements of immediate production, and sets extremely high standards at every stage in the logistics chain.

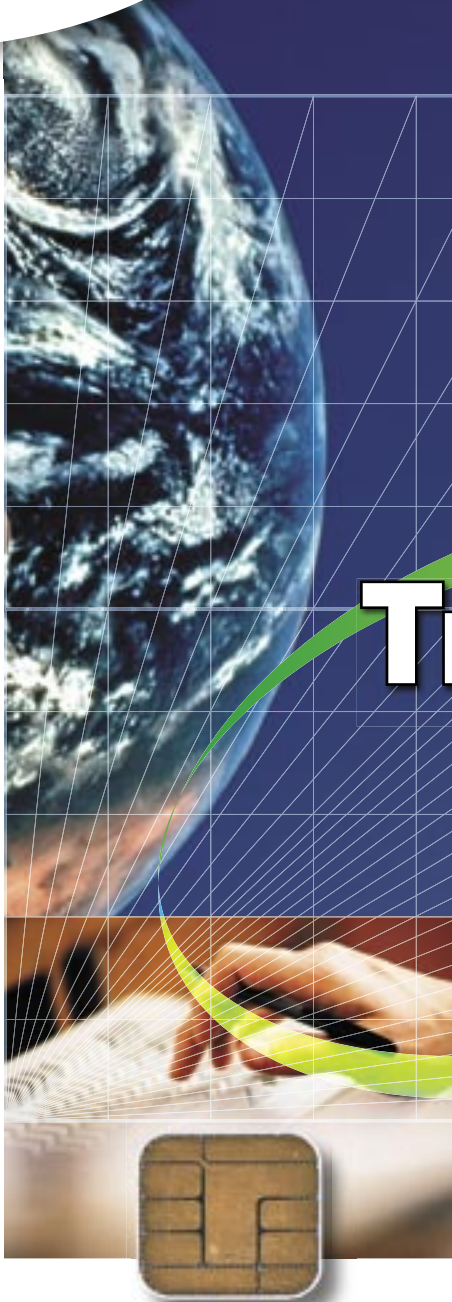

TECL provides an efficient, global solution to your requirements, by making use of assets that are its strength and its distinctiveness:

- *Open 24 hours a day*
- *Secure platforms with controlled access*
- *Multi-warehouse management*
- *Picking and order preparation*
- *Repackaging and special operations*
- *Managing packaging flow and handling equipment*

All of these different areas of expertise are handled and co-ordinated by a high-performance software solution developed for our clients, which gives them real-time access to the information they need.

Your Logistics Partner

Traceability

The traceability of logistic flows is an essential condition for just-in-time management, and is one of TECL's main strengths. In order to offer our clients the best possible form of tracking during transport and in the warehouses, we are equipped with revolutionary IT tools.

These tools are constantly renewed, and integrate secure servers, Wifi platforms, a fleet of vehicles fully equipped with GPS systems, bar code identification of palettes and packets, bar code readers connected to our logistics control centre and a website giving clients access to the traceability of the products that they have entrusted us with.

TECL is today working to improve the transmission of and access to these streams of information, thanks to the implementation of RFID (radio frequency identification). In the near future, this technology will be used to speed up the traceability process.

The future

While it is certain that road transport will play an even more predominant role in Europe, it will have to face up to some major challenges such as the growing scarcity of oil and the increasing need to respect the environment.

For this reason, we regularly renew our fleet of vehicles in order to meet European standards in the fight against pollution, and we are committed to a packaging management programme.

For the longer term, TECL is looking into the synergies that need to be put in place in order to develop Europe-wide, high-speed road-rail transport, adaptable to the demands of just-in-time management. Projects for sea highways will be less adaptable but may be effective in freeing up road networks.

One other way of modernising our services is the transmission of information streams, with the effective implementation of RFID. This is something to which we are already committed and in the near future, it will increase the competitiveness of our logistics services.
